

Streetlight Dimming: Resident Request Procedure

The HOA's electrical contractor can significantly dim part of the streetlight. In order to perform this to the best of our ability, we need to know three things:

- 1) What is your street address?
- 2) Which streetlight pole number is casting the offensive light? Each streetlight pole has a sticker with a number on it.
- 3) Which specific door or window of the house is of most concern regarding the brightness of the streetlight? Please report only one window or door that is of most concern. If you feel the issue affects the "whole side of the house", then please still tell us only one window or door that is most problematic.

Please report the STREETLIGHT POLE NUMBER and the WINDOW/DOOR OF MOST CONCERN to the HOA office. We will schedule with the electrical contractor to dim the streetlight according to your instruction. It may take several months for this work to be performed, depending upon the volume of other streetlight repairs that this work will be scheduled with. You will notice when the streetlight has been dimmed, but you are welcome to contact the office anytime should you wish to check the status. All requests must be emailed to manager@srhoa.com.

Streetlight Dimming: Electrical Contractor Procedure

- 1) Pole Number _____ on _____ Street requires dimming.
- 2) Three (3) diodes need to be deactivated (i.e., dimmed) using the approved procedure.
- 3) The three (3) dimmed diodes must be next to each other/consecutive so that when complete, one whole "side" of the fixture appears dim.
- 4) After dimming, the lamp head must be rotated so that the center-most dimmed diode is directly facing the priority location.
- 5) The priority location is _____ (e.g., an upstairs window on the left, front door, etc.) at address _____.
